DATE MAILED: 01/12/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/864,389	Applicant(s) PINCHASIK ET AL 	
	Examiner Vy Q. Bui	Art Unit 3731	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 December 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-51 is/are pending in the application.
- 4a) Of the above claim(s) 31-41 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-30, 42-47 and 49-51 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Fig. 30

(JAYARAMAN)

Art Unit: 3731

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 1-2, 4, 6-7, 11-12, 14, 16-17, 19, 21-22, 24, 42-47 and 50-51 are rejected under 35 U.S.C. 102(e) as being anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JAYARAMAN (6,162,245).

As to claims 1-2, 4, 6-7, 11-12, 14, 16-17, 19, 42-47, 49 and 50-51, JAYARAMAN (see Fig. 30 on page 3 above) shows a stent structure comprising 1st and 2nd loop containing sections/1st circumferential bands/1st meander pattern of a 1st frequency F1, 3rd loop containing sections/2nd circumferential bands/2nd meander pattern of 2nd frequency F2 > F1 to define cells/triangular cells as recited in the claims.

Notice that JAYARAMAN stent comprises:

a. 3rd loop containing sections are configured in a sinusoidal shape of a frequency F2 higher than a frequency F1 of 1st and 2nd loop containing sections (Fig. 30, page 3 above), therefore 3rd loop containing sections do expand or contract when the stent structure is bent/expanded, thus 3rd loop containing sections do contribute to the cells elongating or

Art Unit: 3731

shortening when the stent is in a curved configuration/expanded configuration. In addition, because the 3rd loop containing sections have more stored length (or more springy/wavy than 1st and 2nd loop containing sections), the 3rd loop containing sections are more flexible and more sensitive to deformation than 1st and 2nd loop containing sections, therefore during flexing of the stent, 3rd loop containing sections contribute more to the stent deformation than 1st and 2nd loop containing sections.

Alternatively, it would have been obvious to one of ordinary skill in the art to size/configure the 3rd loop containing sections so as to make the 3rd loop containing sections more flexible than the 1st and 2nd loop containing sections as this modification of size and shape to make a stent having sections more flexible (for increasing overall flexibility of the stent) than other more rigid sections (for radial strength to keep the lumen of the vessel to open) is well known in the art.

b. Cells/triangular cells in one side of a neutral axis of bending of the JAYARAMAN stent will be in a tension condition and in the other side of the neutral axis will be in a compression condition. Cells under the tension condition will open in length and narrow circumferentially and cells under the compression condition will shorten in length but widen circumferentially.

c. In an collapsed configuration for deployment/before expansion, lines A and B are substantially closed one to another to make two low frequency adjacent bands out of phase 180° as recited in the claims.

d. Fig. 30 shows vertical meander patterns and horizontal meander patterns as recited in the claims.

2. Claims 21-22, 24, 26-27, 29, 48-49 are rejected under 35 U.S.C. 102(a) as being anticipated by BROWN et al. (WO 00/30563 or US 20020007212 A1).

As to claims 21-22, 24, 48-49, BROWN (Fig. 2, page 5, this paper) shows even 1st meander patterns substantially are 180 degree out of phase with odd 1st meander patterns, especially when the stent is squeezed in a collapsed configuration for deployment in a blood vessel before expansion. Even 1st and odd 1st meander patterns alternate with and are spaced from each other to form a uniform flexible structure as recited in the claims. When expanded in

Art Unit: 3731

a curved vessel, BROWN shows cells that increase in length in one side of a neutral axis/bending axis and cells that decrease in length in another side of the neutral axis.

As to claim 26-27 and 29, notice that BROWN stent (see Brown's Fig. 2) comprises many flexible triangular cells to form a uniform mesh of flexible cells. When expanded in a curved vessel, BROWN triangular cells will increase in length in one side of the neutral axis and decrease in length in one side of the neutral axis as recited in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 3, 5, 13, 15, 18, 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over JAYARAMAN (6,162,245) as applied to claims 1-2, 4, 6-7, 11-12, 14, 16-17, 19 above, and further in view of YANG et al (6,120,847).

JAYARAMAN discloses substantially all limitations recited in the claims, except for the stent is coated with a medicine for treatment purpose. However, coating a stent with a medicine or drug is well known in the art. For example, YANG discloses a method for coating a therapeutic substance on the surface of the stent for local treatment of a blood vessel. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide a medicine coating to JAYARAMAN stent so as to have the medicine distributed directly to the treatment site of a blood vessel.

2. Claims 23, 25, 28 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over are rejected under 35 U.S.C. 102(a) as being anticipated by BROWN et al. (WO 00/30563 or US 20020007212 A1) as applied to claims 21-22, 24 above, and further in view of YANG et al (6,120,847).

Art Unit: 3731

BROWN discloses substantially all limitations recited in the claims, except for the stent is coated with a medicine for treatment purpose. However, coating a stent with a medicine or drug is well known in the art. For example, YANG discloses a method for coating a therapeutic substance on the surface of the stent for local treatment of a blood vessel. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide a medicine coating to BROWN stent so as to have the medicine distributed directly to the treatment site of a blood vessel.

Response to Amendment

The amendment and "Remarks" filed on 7/7/2003 under 37 CFR 1.131 has been considered but is moot in view of new grounds of rejection. Notice that both Jayaraman-'245 stent and Brown-WO 00/30563 stent have low frequency bands out of phase 180° when the stents are squeezed to a collapsed configuration for deployment in a blood vessel.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vy Q. Bui whose telephone number is 571-272-4692. The examiner can normally be reached on Monday-Tuesday and Thursday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anhtuan T Nguyen can be reached on 571-272-4963. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
